

# HOT WATER AS A SERVICE

**Energy**co

# About Us

## WELCOME TO A NEW WORLD OF COMFORT AND SECURITY.

Energyco is a Portuguese energy company dedicated exclusively to the hot water supply as a service to business clients on a pay-per-use base.

It was created with the objective of providing hot water to the consumer, releasing him from concerns about the generation, operation and maintenance of hot water systems, providing a competitive service compared to the traditional models.

As experts, our competitive advantages and our expertise allow us to provide hot water cheaper than any business customer can individually.

Energyco implement the principles of circular economy in its business model by designing reliable and durable solutions, producing optimally, providing an integrated service, increasing the energy efficiency of systems and reducing CO2 emissions.

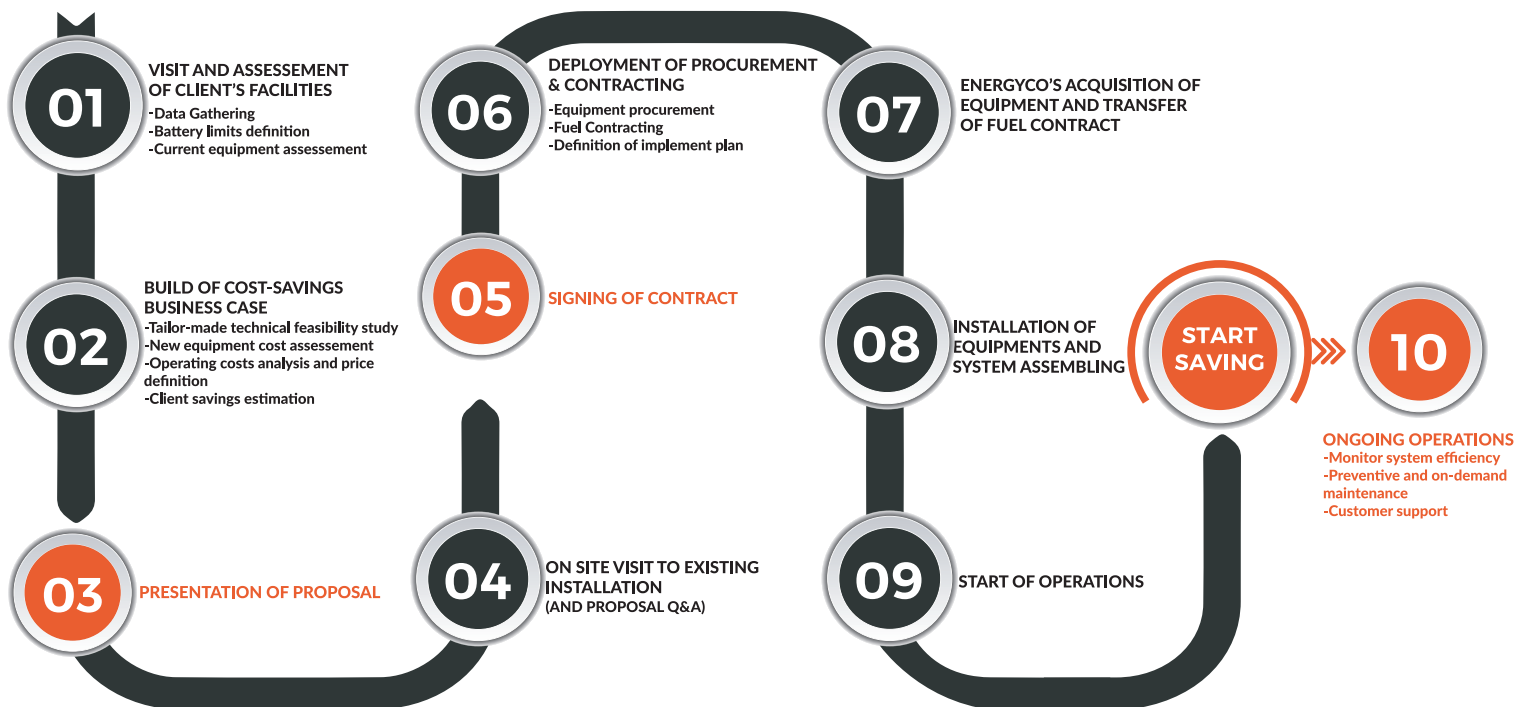

Energyco is committed to optimize costs and resources while preserving the value and utility of systems, increasing productivity and lifetime.

# What We Do

Energyco takes care of the entire process of energy generation with a turnkey service, from design and implementation to operation. We assume the investment in a new installation, with any cost to the customer, ensuring the preventive and corrective maintenance of the equipment. Using high-performance equipments, Energyco guarantees the supply of hot water at a low cost, in a safe and reliable solution, providing a service of excellence.

Road map to start saving with a seamless heating generation system

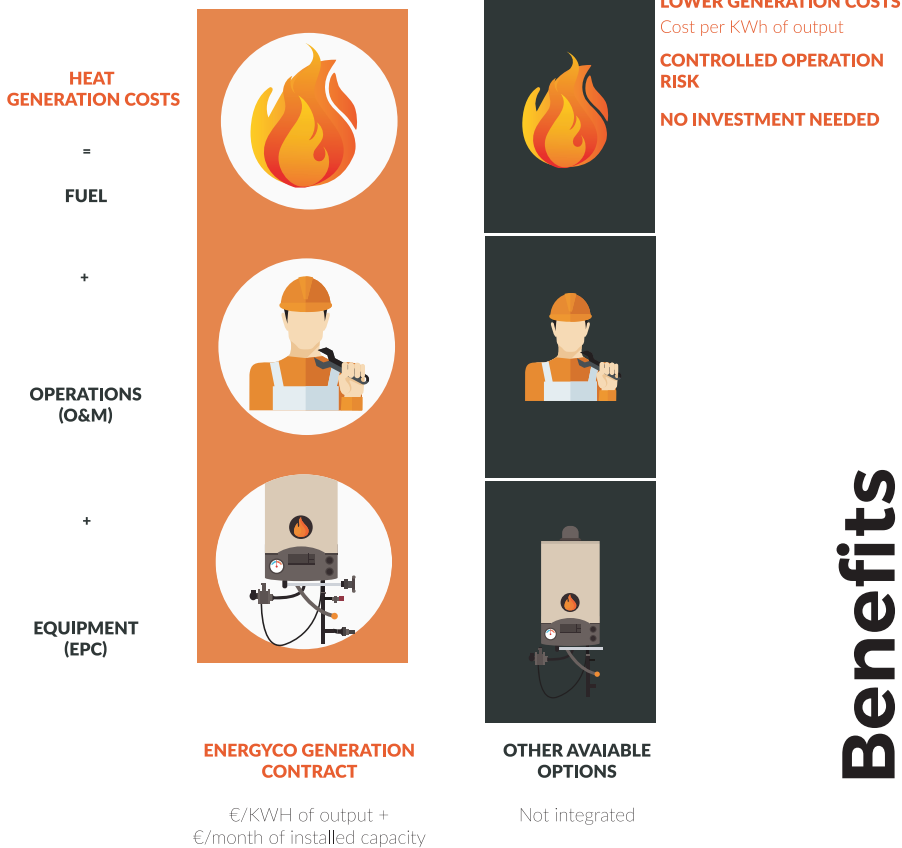

# Energyco Model

## Peace of mind Without any investment

Hot water will be provided as a turn key ready to use media without any investment in equipment or O&M cost to clientes on a pay per use base.

The security and reliability of the supply is guaranteed, with the cost depending on the use.

Energyco puts all its know-how into the customer service, ensuring continuous monitoring of the installation, optimizing resources at no additional costs.

# Benefits

# ENERGYCO IS THE SOLUTION

Energyco seeks to provide the benefits in an innovative and expanding model, combining a policy of permanent investments in the quality and safety of its equipments.

The traditional paradigm, based on a linear model, is confronted today with questions regarding the optimization of resources. A new model, working in closed circuits, is an alternative solution to minimize energy consumption and losses.

We present the best solution for low cost hot water supply.

Contact us without commitment.
